## reliable switch-off and easy switch on

Experiment safely: Our DHS FANA combines switch-disconnector, emergency switching off and remote control in one compact device. If a connected emergency stop button is pressed, the DHS FANA completely disconnects all poles of the system components and loads from the electrical supply. The remote control makes it easy to switch back on without having to go a long way to the electrical distribution board.

- remote switch on and switch-off
- enables connection of several emergency stop buttons
- remains switched on in case of voltage drop
- fulfils in combination with an RCD type B the requirements of DIN VDE 0100-723 for classrooms with experimental equipment
- for schools, laboratories, research facilities and wherever experiments are carried out with electrical circuits

product name	article number
switch-disconnector DHS 4-063 FANA24DC	09900017
switch-disconnector DHS 4-125 FANA24DC	09900018
