

DATA SHEET

residual current circuit-breaker
DFS 4 125-4/0,30-AC
sensitive to residual currents Type AC
Article number 09176902

Function

Residual current circuit-breakers (RCCBs) are components for implementing protective measure "Automatic disconnection of the power supply" as per VDE 0100 part 410 or corresponding international installation regulations. Series DFS 4 devices are compact two or four-pole residual current circuit-breakers. In the standard design, they only take up four module width units of space. Although DFS 4 devices for AC and pulsating DC residual currents are actually designed for three-phase networks, they can also be used in single-phase networks. However, in addition to these, special variants are also available for single or three-phase operation in the form of the AC/DC sensitive designs (type B, type B+). In spite of the compact dimensions, a number of different tripping currents and characteristics are available at rated currents, depending on the design, up to 125 A. They also have large two-tier terminals for large conductor cross-sections, a practical multi-functional switch toggle and can be provided with labels using free-of-charge software. Switches with residual current characteristic AC only detect AC residual currents. They cannot detect pulsating DC residual currents so are not permitted for use as residual current operated protective devices in Germany. They are therefore only available as export models. Devices in the standard design are intended for monitoring circuits with a rated voltage of 230 V, 400 V and a rated frequency of 50 Hz.

Features

tripping not dependent on mains and auxiliary voltage, sensitive to AC residual currents (type AC), compact design for all rated currents, high short-circuit resistance, double-sided two-tier terminals for large conductor cross-section and busbar, switch position indicator, viewing window for labels, multifunction switch toggle with three positions: "on", "off" and "tripped", Neutral conductor position left

Mounting

quick fastening to mounting rail, any installation position, supply from any direction

Applications

Power supplies to residential and purpose-built buildings as well as industrial facilities with TN-S, TT and TN-C-S networks. In IT networks, the residual current circuit-breakers of this series can be set to switch off in the event of a second fault, Not permitted for use in TN-C networks; not permitted for protecting systems in which electronic equipment may cause pulsating or smooth DC residual currents or residual currents with frequencies not equal to 50 Hz. Comprehensive protection is not provided with an RCCB type AC. For these applications we recommend our residual current circuit-breaker type A or our AC/DC sensitive residual current circuit-breaker type B/B+.

Accessories

automatic reclosing devices DFA, terminal caps KA, information stickers HAS, auxiliary switches DHi, restart locks DFS WES, software DRS

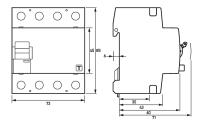

Technical Data

Technical Data	DFS 4 125-4/0,30-AC
Series	DFS 4 AC
Number of poles	4
Residual current type	AC
Rated current (AC)	125 A
Rated residual current I∆n	0.3 A
Short-time delayed	false
Selective	false
min. Operating voltage range of test circuit	200 V

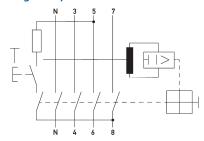

max. Operating voltage range of test circuit	
3 73 1	
load circuit	
Specification load disconnect contact	
min. Contact opening 4 mm	
Rated voltage (AC) 230 V, 400 V	
Rated current (AC) 125 A	
Rated short-circuit current 10 kA	
Surge current strength 0.25 kA	
max. Total rated switching 1250 A capacity	
Rated insulation voltage 400 V	
Rated impulse withstand voltage 4 kV	
Rated frequency 50 Hz	
Current heat loss per current path 11.2 W	
Thermal Backup-fuse OCPD 8o A	
Short-circuit backup-fuse SCPD 125 A	
Back-up fuse type gG	
screw-type terminal top and bottom (load ci	rcuit)
Neutral conductor position left	
Protection against direct contact DGUV V ₃ , VDE o660-514, finger and back-of-han	d proof
