DATA SHEET

Internetlink

Function

Central control devices process input signals and set output signals depending on their configured function. They also frequently offer interfaces for display. The DKG 20 and DKG 21-GSM channel generators are central units of the Dupline installation system. They provide the following main functions: Generating the bus signal for all other components connected to the Dupline bus; Supplying power to decentral components; Controlling the outputs in accordance with the inputs of the Dupline bus; Interface between Dupline bus and Modbus communication, e.g. memory-programmable controls or visualisation components; Transmitting and receiving SMSs for remote monitoring (DKG 21-GSM only). The configuration software ProLineNG, available free-of-charge, enables all parameters for the abovementioned functions to be set. It can be downloaded without a licence fee from our homepage http://www.doepke.de. The configuration file provided will be permanently stored with ProLineNG in the channel generator and can also be saved on hard disk. You can also at any time retrieve, and modify, the configuration permanently stored in the DKG. The channel generators support a total of 128 functions (addresses), which can be assigned to a wide range of easy to set automation functions for buildings and industry. In addition, more complex functions can be set up with the aid of the logic connectives. The DKGs also support the operation of meter modules so that - when using workstations with appropriate software, e.g. the Doepke DPCamp interface software - the energy consumption can be recorded and analysed in accounting programmes and energy management systems. The automatic time synchronisation via the DCF signal and the possibility to set or read addresses by means of SMS (DKG 21-GSM only) bring down the possible applications to a round figure.

Features

Channel generator for a Dupline bus with 128 channels, Predefined objects: push-button function, timer, time switch, proximity detector, sensor, central and group command, shutter control, alarm systems (ISA, fire, break-in, water), Configuration software ProLineNG available free-of-charge, Logic connectives (AND, OR, XOR) to set up combined automation functions, LEDs for indicating operating voltage, bus signal, COM ports and GSM activity (DKG 21-GSM only), Interfaces/ports: 1 x Dupline, 1 x RS232 for configuration via ProLineNG, 1 x RS232 for connecting e.g. touch panel, PC and radio modems, baud rate selectable, 1 x RS485 for interlinking up to 32 DKG 20s/DKG 21-GSMs, 4 digital inputs, 4 digital outputs, Input for optional active DCF antenna for reception of the DCF signal from Rugby, Interconnection: Setting up a distributed Dupline system with the aid of radio modems, type Satel, or connecting up to 32 DKG 20s/DKG 21-GSMs with automatic data exchange and synchronisation of time, DKG 21-GSM: Dual band GSM modem (EGSM900/GSM1800) with external optional, Power supply 115/230 V AC

Mounting

quick fastening to mounting rail, any installation position

Applications

The channel generators are used in conjunction with other components of the Dupline bus system for the automation of buildings and processes, such asin private and commercially used buildings for controlling lighting, roller shutters, room temperature and for triggering alarms if a break-in occurs or a fire breaks out, for example;, in schools for saving energy through automated lighting and temperature control;, in shipyards for fire alarm during assembly;, in industrial facilities for reporting faults and controlling processes.

Notes

Due to the architecture of the COM port, operation with USB-to-RS-232 converters is usually not possible. If your PC or notebook does not have a COM/RS-232 interface, we recommend using our PCMCIA adaptor DCI 1 or similar, The number of channels cannot be extended by combining the bus lines of two or more DKG devices. Dupline bus lines of different channel generators must not be connected to each other.

Buffer time real-time clock Operating voltage (AC) 115 V, 230 V (97.75 V 264.5 V) Operating frequency 45 Hz 65 Hz Internal consumption max. 7 W Display Supply voltage Type LED (green) Type LED (yellow) Type LED (red) Semiconductor input number 4 Rated voltage (AC) Rated voltage (DC) Rated current max. 6 mA Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) Rated voltage (DC) Semiconductor Semiconductor Capacitation Semiconductor Capacitation Semiconductor Capacitation Semiconductor Capacitation Semiconductor Capacitation Semiconductor Capacitation General data description General data Operating position	max. Serial IF IF ₃ Cable length	1000 m
Operating voltage (AC) 115 V, 230 V (97.75 V 264.5 V) Operating frequency 45 Hz 65 Hz Internal consumption max. 7 W Display Supply voltage Type LED (green) Display Bus signal Type LED (yellow) Type LED (red) Semiconductor input number 4 Rated voltage (AC) Rated voltage (DC) Rated current Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area Output General data Operating position any	Accuracy clock time	1 min
Operating frequency Internal consumption max. 7 W Display Supply voltage Type LED (green) Display Bus signal Type LED (yellow) Type LED (red) Semiconductor input number 4 Rated voltage (AC) Rated voltage (DC) Rated current Semiconductor output Semiconductor output Semiconductor output A Semiconductor output Semiconductor output Semiconductor output Semiconductor output Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) Semiconductor Semiconductor Clamping area O.4 mm² 2.5 mm² General data description General data Operating position	Buffer time real-time clock	48 h
Internal consumption max. 7 W Display Supply voltage Type LED (green) Display Bus signal Type LED (yellow) Type LED (red) Semiconductor input number 4 Rated voltage (AC) 6 V 30 V Rated voltage (DC) 6 V 30 V Rated current max. 6 mA Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area 0.4 mm² 2.5 mm² General data description General data Operating position	Operating voltage (AC)	115 V, 230 V (97.75 V 264.5 V)
Type LED (green) Display Bus signal Type LED (yellow) Type LED (red) Semiconductor input number 4 Rated voltage (AC) 6 V 30 V Rated voltage (DC) 6 V 30 V Rated current max. 6 mA Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) 6 Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) 6 Semiconductor Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area 0.4 mm² 2.5 mm² General data description General data Operating position any	Operating frequency	45 Hz 65 Hz
Type LED (green) Display Bus signal Type LED (yellow) Type LED (red) Semiconductor input number 4 Rated voltage (AC) 6 V 30 V Rated voltage (DC) 6 V 30 V Rated current max. 6 mA Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area 0.4 mm² 2.5 mm² General data description General data Operating position	Internal consumption	max. ⁊ W
Display Bus signal Type LED (yellow) Type LED (red) Semiconductor input number Rated voltage (AC) Rated voltage (DC) Rated current Max. 6 mA Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) Semiconductor Semiconductor Comparison Semiconductor Semiconductor Number 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area 0.4 mm² 2.5 mm² General data description General data Operating position		Display Supply voltage
Type LED (yellow) Type LED (red) Semiconductor input number 4 Rated voltage (AC) Rated voltage (DC) Rated current max. 6 mA Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) Semiconductor Semiconductor Number 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area 0.4 mm² 2.5 mm² General data description General data Operating position	Туре	LED (green)
Type LED (red) Semiconductor input number 4 Rated voltage (AC) Rated voltage (DC) Rated current max. 6 mA Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area General data description General data Operating position		Display Bus signal
Semiconductor input number	Туре	LED (yellow)
number 4 Rated voltage (AC) 6 V 30 V Rated voltage (DC) 6 V 30 V Rated current max. 6 mA Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area 0.4 mm² 2.5 mm² General data description General data Operating position any	Туре	LED (red)
Rated voltage (AC) Rated voltage (DC) Rated current max. 6 mA Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area Operating position 6 V 30 V 6 V 30 V 8 Av 30 V Semiconductor Semiconductor Semiconductor 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) General data description General data Operating position		Semiconductor input
Rated voltage (DC) Rated current max. 6 mA Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area Operating position 6 V 30 V max. 6 mA Semiconductor Semiconductor Semiconductor Semiconductor Operating top (Bus connection) General data	number	
Rated current max. 6 mA Semiconductor output Specification Semiconductor Number 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area 0.4 mm² 2.5 mm² General data description General data Operating position any	Rated voltage (AC)	6 V 30 V
Specification Semiconductor Number 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area 0.4 mm² 2.5 mm² General data description General data Operating position any	Rated voltage (DC)	6 V 30 V
Specification Semiconductor Number 4 Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area 0.4 mm² 2.5 mm² General data description General data Operating position any	Rated current	max. 6 mA
Number Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area 0.4 mm² 2.5 mm² General data description General data Operating position any		Semiconductor output
Rated voltage (DC) max. 35 V Screw-type terminal top (Bus connection) Clamping area 0.4 mm² 2.5 mm² General data description General data Operating position any	Specification	Semiconductor
Screw-type terminal top (Bus connection) Clamping area 0.4 mm² 2.5 mm² General data description General data Operating position any	Number	4
Clamping area 0.4 mm² 2.5 mm² General data description General data Operating position any	Rated voltage (DC)	max. 35 V
General data description General data Operating position any		Screw-type terminal top (Bus connection)
Operating position any	Clamping area	
		General data
	Operating position	·
Ambient temperature 0 °C 50 °C	Ambient temperature	o °C 50 °C
Permissible humidity max. 80 %	Permissible humidity	max. 80 %
Housing type Distributor housing	Housing type	Distributor housing

Technical Data	DKG 20
Mounting type	Mounting rail
Housing material	Polycarbonate (PC)
Protection class	IP ₂₀
Width	144 mm
Height	78 mm
Depth	75 mm
Width (modules)	8
Design requirements/Standards	EN 60664

Dimensions
